KODAK ORTHOTRAC Practice Management Software Version 11 Offers Microsoft SQL and Macintosh Compatibility

ATLANTA, GA, August 12 — A new version of KODAK ORTHOTRAC Practice Management Software, released today by PracticeWorks, Inc., offers a variety of new features to help make orthodontic practices more efficient and eliminate reliance on paper-based systems. “Since we develop, manufacture and market an entire portfolio of orthodontic practice management and digital imaging software and equipment, we are uniquely positioned to help make complete practice integration a reality,” noted Jamie Lynne Weiss, Market Manager – Orthodontic Division for PracticeWorks, Inc. “With ORTHOTRAC Software version 11.0, orthodontic professionals can leverage a full suite of powerful tools to perform daily tasks more effectively and simplify office operations.”

The new software adds customized views in the treatment card, enhanced note-taking capabilities in the charting module, and drag-and-drop scheduling with an optional clipboard. In addition, new reports have been added including a Wilting Referral Report to show the decline in patient referrals from outside doctors; a Referrals Out Report to show the patients referred out to doctors for a specific date range; and a Future Patient Age Report to show future patients (non-patient family members of existing patients) who will be a certain age in a specified month and year.

Other new features/benefits of ORTHOTRAC Software version 11.0 include:

- **MICROSOFT SQL 2005 database compatibility** – Install ORTHOTRAC Software version 11.0 and the ORTHOTRAC Access databases are converted to SQL Server databases.
- **Cutting-edge product integration** – Allows users to access the functionality of KODAK Orthodontic Imaging Software—the software that runs KODAK digital radiography and photography systems—directly from practice

management desktops. Users can view, manage, and even acquire digital radiography images without switching between computers or software programs.

- **Macintosh compatibility** – ORTHOTRAC Software can now be used on a Macintosh operating system by running Windows XP via Boot Camp, Fusion, or Parallels.
- **View archived schedule days** – View archived schedule days with the scheduler displaying completed and no-show appointments. When viewing a schedule day that has already passed, the scheduler is displayed in gray colors, indicating an archived day.
